

45 DEG WALL CABINET

Fitting Guide

Screws for attaching to walls are not provided as these vary depending on materials, thickness and construction. Ensure appropriate fixings for wall are used.

Step 1.

Use a stud finder to locate the studs on both walls. Mark the walls at the appropriate heights identifying which studs to use.

Step 2.

Position adjustable hanging rail (supplied with the cabinet) on the wall and screw in two places in the top and bottom where possible, securing the rail to the wall. The hanging rail is adjustable and can be placed on the most appropriate stud along the wall that falls behind the cabinet.

Step 3.

Position cabinet on the wall and screw in four places in the top and bottom hanging rails and the adjustable hanging rail where possible, securing the cabinet to the wall.

Step 4.

If a stud is not available secure to adjacent cabinet using step 5 and **secure using a suitable fixing to the wall.**

Sample Cabinet Shown

View cut away from top panel.

Step 5.

Screw into any adjacent cabinets using 1 1/4" screws (H) provided to secure the cabinet. Screw just to the rear of the hinge plate and to the rear of the cabinet at the top and bottom. Place a cover cap on the head to conceal it.
